

[interior trim]

Futuris is recognized as a global player in automotive interior trim. Futuris offers a full range of soft trim and NVH acoustic products.

Futuris designs and manufactures integrated door trim systems, incorporating the use of high quality plastics, trim, electrics and other components. The look, feel and touch compliment precisely those of Futuris' seats. Headliner modules also form part of the Futuris interior trim portfolio, completing the interface between passenger and vehicle. Futuris provides variations from simple roof coverings to fully modular and complex roof systems, integrating lighting, assist grips and entertainment systems. Futuris also provides a broad range of other interior trim, including trunk trim, parcel shelf and acoustic insulator mouldings.

Futuris floor carpets — through unique and innovative product offerings — are changing the way vehicle producers design their flooring. Such examples include Futuris' patented footprint™ and enviroTUF™ PET floor carpet solutions. Footprint™ zones the floor area to enable reduced cost, improved mass & acoustic performance and offers styling flexibility never before seen in floor carpets. enviroTUF™ PET enables recycled plastic bottles to be converted into high quality automotive grade tufted carpet.

Covering the whole development process, from concept designs and raw materials technology through to volume manufacturing, Futuris provides a total solution to customers.

An unyielding focus on quality, value and innovation made Futuris the leading automotive interior trim supplier in Australia. Now across China, Asia Pacific, North America and South Africa, Futuris is rapidly developing long-term global partnerships and flexible supply solutions.
